

The Ashdene Maths Learning Sequence in Reception

Some further information on how we develop children's fluency with basic number facts

Fluent computational skills are dependent on accurate and rapid recall of basic number bonds to 20 and times-tables facts. At Ashdene we spend a short time every day on these basic facts quickly leads to improved fluency. This can be done using simple whole class chorus chanting. This is not meaningless rote learning; rather, this is an important step to developing conceptual understanding through identifying patterns and relationships between the tables (for example, that the products in the $6\times$ table are double the products in the $3\times$ table). We learn our multiplication tables in this order to provide opportunities to make connections:

$\times 10$	$\times 5$	$\times 2$	$\times 4$	$\times 8$	$\times 3$	$\times 6$	$\times 9$	$\times 7$
-------------	------------	------------	------------	------------	------------	------------	------------	------------

Year 2

$\times 10$	$\times 5$	$\times 2$
-------------	------------	------------

Year 3

$\times 10$	$\times 5$	$\times 2$	$\times 4$	$\times 8$	$\times 3$
-------------	------------	------------	------------	------------	------------

Year 4

$\times 10$	$\times 5$	$\times 2$	$\times 4$	$\times 8$	$\times 3$	$\times 6$	$\times 9$	$\times 7$
-------------	------------	------------	------------	------------	------------	------------	------------	------------

 (including $11\times$ and $12\times$)

Develop children's fluency in mental calculation

Efficiency in calculation requires having a variety of mental strategies. In particular, we recognise the importance of 10 and partitioning numbers to bridge through 10. For example: $9 + 6 = 9 + 1 + 5 = 10 + 5 = 15$. It is helpful to make a 10 as this makes the calculation easier.

Develop fluency in the use of formal written methods

Teaching column methods for calculation provides the opportunity to develop both procedural and conceptual fluency. At Ashdene we ensure that children understand the structure of the mathematics presented in the algorithms, with a particular emphasis on place value. We use concrete resources to support the development of fluency and understanding. Informal methods of recording calculations are an important stage to help children develop fluency with formal methods of recording. However, it is important that these are only used for a short period to help children understand the internal logic of formal methods of recording calculations. These are the stepping stones to formal written methods.

Ashdene Primary School – Maths Curriculum Progression Document

Purpose of study	Mathematics is a creative and highly inter-connected discipline that has been developed over centuries, providing the solution to some of history's most intriguing problems. It is essential to everyday life, critical to science, technology and engineering, and necessary for financial literacy and most forms of employment. A high-quality mathematics education therefore provides a foundation for understanding the world, the ability to reason mathematically, an appreciation of the beauty and power of mathematics, and a sense of enjoyment and curiosity about the subject.
Aims	<ul style="list-style-type: none"> become fluent in the fundamentals of mathematics, including through varied and frequent practice with increasingly complex problems over time, so that pupils develop conceptual understanding and the ability to recall and apply knowledge rapidly and accurately reason mathematically by following a line of enquiry, conjecturing relationships and generalisations, and developing an argument, justification or proof using mathematical language can solve problems by applying their mathematics to a variety of routine and non-routine problems with increasing sophistication, including breaking down problems into a series of simpler steps and persevering in seeking solutions.
Maths at Ashdene	At Ashdene in every maths lesson we aim to develop children's reasoning and problem solving. Furthermore, children develop their mathematical understanding through the use of concrete, pictorial and abstract resourcing which are made available to all children in every lesson. We aim to revisit and review mathematical concepts, make links between them and use them in real life contexts, in order to ensure that children have a deeper understanding of the maths curriculum.

EYFS	Maths Objective	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
<p><u>Numerical Patterns</u></p> <p>Verbally count beyond 20, recognizing the pattern of the counting system</p> <p>Compare quantities up to 10 in different contexts, recognizing when one quantity is greater than, less than, or the same as the other quantity</p> <p><u>Number</u></p> <p>Subitise (recognize quantities without counting) up to 5</p>	<p>Number – Number and Place Value</p>	<p>Count to and across 100, forwards and backwards, beginning with 0 or 1, or from any given number</p> <p>Count, read and write numbers to 100 in numerals; count in multiples of twos, fives and tens</p> <p>Given a number, identify one more and one less</p> <p>Identify and represent numbers using objects and pictorial representations including the number line, and use the language of: equal to, more than, less than (fewer), most, least</p>	<p>Count in steps of 2, 3, and 5 from 0, and in tens from any number, forward and backward</p> <p>Recognise the place value of each digit in a two-digit number (tens, ones)</p> <p>Identify, represent and estimate numbers using different representations, including the number line</p> <p>Compare and order numbers from 0 up to 100; use <, > and = signs</p> <p>Read and write numbers to at least 100 in numerals and in words</p>	<p>Count from 0 in multiples of 4, 8, 50 and 100; find 10 or 100 more or less than a given number</p> <p>Recognise the place value of each digit in a three-digit number (hundreds, tens, ones)</p> <p>Compare and order numbers up to 1000</p> <p>Identify, represent and estimate numbers using different representations</p> <p>Read and write numbers up to 1000 in numerals and in words</p>	<p>Count in multiples of 6, 7, 9, 25 and 1000</p> <p>Find 1000 more or less than a given number</p> <p>Count backwards through zero to include negative numbers</p> <p>Recognise the place value of each digit in a four-digit number (thousands, hundreds, tens, and ones)</p> <p>Order and compare numbers beyond 1000</p> <p>Identify, represent and estimate numbers using different representations</p>	<p>Read, write, order and compare numbers to at least 1 000 000 and determine the value of each digit</p> <p>Count forwards or backwards in steps of powers of 10 for any given number up to 1 000 000</p> <p>Interpret negative numbers in context, count forwards and backwards with positive and negative whole numbers, including through zero</p> <p>Round any number up to 1 000 000 to the nearest 10, 100, 1000, 10 000 and 100 000</p>	<p>Read, write, order and compare numbers up to 10 000 000 and determine the value of each digit</p> <p>Round any whole number to a required degree of accuracy</p> <p>Use negative numbers in context, and calculate intervals across zero</p> <p>Solve number and practical problems that involve all of the above.</p>

		Read and write numbers from 1 to 20 in numerals and words.	Use place value and number facts to solve problems.	Solve number problems and practical problems involving these ideas.	Round any number to the nearest 10, 100 or 1000 Solve number and practical problems that involve all of the above and with increasingly large positive numbers Read Roman numerals to 100 (I to C) and know that over time, the numeral system changed to include the concept of zero and place value.	Solve number problems and practical problems that involve all of the above Read Roman numerals to 1000 (M) and recognise years written in Roman numerals.	
<p><u>Numerical patterns</u></p> <p>Have a deep understanding of numbers to 10, including the composition of each number</p> <p><u>Number</u></p> <p>Automatically recall (without reference to rhymes, counting or other aids) number bonds up to 5 (including subtraction facts) and some number bonds to 10, including double facts</p>	<h2>Number – Addition and Subtraction</h2>	<p>Read, write and interpret mathematical statements involving addition (+), subtraction (–) and equals (=) signs</p> <p>Represent and use number bonds and related subtraction facts within 20</p> <p>Add and subtract one-digit and two-digit numbers to 20, including zero</p> <p>Solve one-step problems that involve addition and subtraction, using concrete objects and pictorial representations, and missing number problems such as $7 = \square - 9$.</p>	<p>Solve problems with addition and subtraction: using concrete objects and pictorial representations, including those involving numbers, quantities and measures</p> <p>Applying their increasing knowledge of mental and written methods</p> <p>Recall and use addition and subtraction facts to 20 fluently, and derive and use related facts up to 100</p> <p>Add and subtract numbers using concrete objects, pictorial representations, and mentally, including: a two-digit number and ones; a two-digit number and tens; two two-digit numbers; adding three one-digit numbers</p> <p>Show that addition of two numbers can be done in any order (commutative) and subtraction of one number from another cannot</p>	<p>Add and subtract numbers mentally, including:</p> <ul style="list-style-type: none"> - A three-digit number and ones - A three-digit number and tens - A three-digit number and hundreds <p>Add and subtract numbers with up to three digits, using formal written methods of columnar addition and subtraction</p> <p>Estimate the answer to a calculation and use inverse operations to check answers</p> <p>Solve problems, including missing number problems, using number facts, place value, and more complex addition and subtraction.</p>	<p>Add and subtract numbers with up to 4 digits using the formal written methods of columnar addition and subtraction where appropriate</p> <p>Estimate and use inverse operations to check answers to a calculation</p> <p>Solve addition and subtraction two-step problems in contexts, deciding which operations and methods to use and why.</p>	<p>Add and subtract whole numbers with more than 4 digits, including using formal written methods (columnar addition and subtraction)</p> <p>Add and subtract numbers mentally with increasingly large numbers</p> <p>Use rounding to check answers to calculations and determine, in the context of a problem, levels of accuracy</p> <p>Solve addition and subtraction multi-step problems in contexts, deciding which operations and methods to use and why.</p>	<p>Multiply multi-digit numbers up to 4 digits by a two-digit whole number using the formal written method of long multiplication</p> <p>Divide numbers up to 4 digits by a two-digit whole number using the formal written method of long division, and interpret remainders as whole number remainders, fractions, or by rounding, as appropriate for the context</p> <p>Divide numbers up to 4 digits by a two-digit number using the formal written method of short division where appropriate, interpreting remainders according to the context</p> <p>Perform mental calculations, including with mixed operations and large numbers</p> <p>Identify common factors, common multiples and prime numbers</p> <p>Use their knowledge of the order of operations to carry out calculations involving the four operations</p>

			Recognise and use the inverse relationship between addition and subtraction and use this to check calculations and solve missing number problems.				Solve addition and subtraction multi-step problems in contexts, deciding which operations and methods to use and why
<p><u>Numerical patterns</u></p> <p>Explore and represent patterns within numbers up to 10, including evens and odds, double facts and how quantities can be distributed equally</p>	<h2>Number – Multiplication and Division</h2>	<p>Solve one-step problems involving multiplication and division, by calculating the answer using concrete objects, pictorial representations and arrays with the support of the teacher.</p>	<p>Recall and use multiplication and division facts for the 2, 5 and 10 multiplication tables, including recognising odd and even numbers</p> <p>Calculate mathematical statements for multiplication and division within the multiplication tables and write them using the multiplication (x), division (÷) and equals (=) signs</p> <p>Show that multiplication of two numbers can be done in any order (commutative) and division of one number by another cannot</p> <p>Solve problems involving multiplication and division, using materials, arrays, repeated addition, mental methods, and multiplication and division facts, including problems in contexts.</p>	<p>Recall and use multiplication and division facts for the 3, 4 and 8 multiplication tables</p> <p>Write and calculate mathematical statements for multiplication and division using the multiplication tables that they know, including for two-digit numbers times one-digit numbers, using mental and progressing to formal written methods</p> <p>Solve problems, including missing number problems, involving multiplication and division, including positive integer scaling problems and correspondence problems in which n objects are connected to m objects.</p>	<p>Recall multiplication and division facts for multiplication tables up to 12 × 12</p> <p>Use place value, known and derived facts to multiply and divide mentally, including: multiplying by 0 and 1; dividing by 1; multiplying together three numbers</p> <p>Recognise and use factor pairs and commutativity in mental calculations</p> <p>Multiply two-digit and three-digit numbers by a one-digit number using formal written layout</p> <p>Solve problems involving multiplying and adding, including using the distributive law to multiply two digit numbers by one digit, integer scaling problems and harder correspondence problems such as n objects are connected to m objects.</p>	<p>Identify multiples and factors, including finding all factor pairs of a number, and common factors of two numbers</p> <p>Know and use the vocabulary of prime numbers, prime factors and composite (non-prime) numbers</p> <p>Establish whether a number up to 100 is prime and recall prime numbers up to 19</p> <p>Multiply numbers up to 4 digits by a one- or two-digit number using a formal written method, including long multiplication for two-digit numbers</p> <p>Multiply and divide numbers mentally drawing upon known facts</p> <p>Divide numbers up to 4 digits by a one-digit number using the formal written method of short division and interpret remainders appropriately for the context</p> <p>Multiply and divide whole numbers and those involving decimals by 10, 100 and 1000</p>	
<p><u>Numerical patterns</u></p> <p>Explore and represent patterns within numbers up to 10 ... and how quantities can be distributed equally</p>		<h2>Number - Fractions</h2>	<p>Recognise, find and name a half as one of two equal parts of an object, shape or quantity</p>	<p>Recognise, find, name and write fractions $\frac{1}{3}$, $\frac{1}{4}$, $\frac{2}{4}$ and $\frac{3}{4}$ of a length, shape, set</p>	<p>Count up and down in tenths; recognise that tenths arise from dividing an object into 10 equal parts and in dividing</p>	<p>Recognise and show, using diagrams, families of common equivalent fractions</p> <p>Count up and down in hundredths; recognise that</p>	<p>Compare and order fractions whose denominators are all multiples of the same number</p>

		<p>Recognise, find and name a quarter as one of four equal parts of an object, shape or quantity.</p>	<p>of objects or quantity</p> <p>Write simple fractions for example, $\frac{1}{2}$ of 6 = 3 and recognise the equivalence of $\frac{2}{4}$ and $\frac{1}{2}$.</p>	<p>one-digit numbers or quantities by 10</p> <p>Recognise, find and write fractions of a discrete set of objects: unit fractions and non-unit fractions with small denominators</p> <p>Recognise and use fractions as numbers: unit fractions and non-unit fractions with small denominators</p> <p>Recognise and show, using diagrams, equivalent fractions with small denominators</p> <p>Add and subtract fractions with the same denominator within one whole [for example, $\frac{5}{7} + \frac{1}{7} = \frac{6}{7}$]</p> <p>Compare and order unit fractions, and fractions with the same denominators</p> <p>Solve problems that involve all of the above.</p>	<p>hundredths arise when dividing an object by one hundred and dividing tenths by ten.</p> <p>Solve problems involving increasingly harder fractions to calculate quantities, and fractions to divide quantities, including non-unit fractions where the answer is a whole number</p> <p>Add and subtract fractions with the same denominator</p> <p>Recognise and write decimal equivalents of any number of tenths or hundredths</p> <p>Recognise and write decimal equivalents to $\frac{1}{4}$, $\frac{1}{2}$, $\frac{3}{4}$</p> <p>Find the effect of dividing a one- or two-digit number by 10 and 100, identifying the value of the digits in the answer as ones, tenths and hundredths</p> <p>Round decimals with one decimal place to the nearest whole number</p> <p>Compare numbers with the same number of decimal places up to two decimal places</p> <p>Solve simple measure and money problems involving fractions and decimals to two decimal places.</p>	<p>Identify, name and write equivalent fractions of a given fraction, represented visually, including tenths and hundredths</p> <p>Recognise mixed numbers and improper fractions and convert from one form to the other and write mathematical statements > 1 as a mixed number [for example, $\frac{2}{5} + \frac{4}{5} = 1\frac{1}{5}$]</p> <p>Add and subtract fractions with the same denominator and denominators that are multiples of the same number</p> <p>Multiply proper fractions and mixed numbers by whole numbers, supported by materials and diagrams</p> <p>Read and write decimal numbers as fractions [for example, $0.71 = \frac{71}{100}$]</p> <p>Recognise and use thousandths and relate them to tenths, hundredths and decimal equivalents</p> <p>Round decimals with two decimal places to the nearest whole number and to one decimal place</p> <p>Read, write, order and compare numbers with up to three decimal places</p>	<p>Compare and order fractions, including fractions > 1</p> <p>Add and subtract fractions with different denominators and mixed numbers, using the concept of equivalent fractions</p> <p>Multiply simple pairs of proper fractions, writing the answer in its simplest form [for example, $\frac{1}{2} \times \frac{1}{4} = \frac{1}{8}$]</p> <p>Divide proper fractions by whole numbers [for example, $\frac{1}{3} \div 2 = \frac{1}{6}$]</p> <p>Associate a fraction with division and calculate decimal fraction equivalents [for example, 0.375] for a simple fraction [for example, $\frac{3}{8}$]</p> <p>Identify the value of each digit in numbers given to three decimal places and multiply and divide numbers by 10, 100 and 1000 giving answers up to three decimal places</p> <p>Multiply one-digit numbers with up to two decimal places by whole numbers</p> <p>Use written division methods in cases where the answer has up to two decimal places</p> <p>Solve problems which require answers to be rounded to specified degrees of accuracy</p> <p>Recall and use equivalences between simple fractions, decimals and</p>
--	--	---	--	--	--	--	--

						<p>Solve problems involving number up to three decimal places</p> <p>Recognise the per cent symbol (%) and understand that per cent relates to 'number of parts per hundred', and write percentages as a fraction with denominator 100, and as a decimal</p> <p>Solve problems which require knowing percentage and decimal equivalents of $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{5}$, $\frac{2}{5}$, $\frac{4}{5}$ and those fractions with a denominator of a multiple of 10 or 25.</p>	<p>percentages, including in different contexts</p>
<p><u>2019 ELG</u></p> <p>Children use everyday language to talk about size, weight, capacity, position, distance, time and money to compare quantities and objects and to solve problems</p> <p>*There are currently no measurement ELG statements on the new adopter curriculum</p>	<h2>Measurement</h2>	<p>Compare, describe and solve practical problems for:</p> <ul style="list-style-type: none"> - Lengths and heights [for example, long/short, longer/shorter, tall/short, double/half] - Mass/weight [for example, heavy/light, heavier than, lighter than] - Capacity and volume [for example, full/empty, more than, less than, half, half full, quarter] - Time [for example, quicker, slower, earlier, later] <p>Measure and begin to record the following:</p> <ul style="list-style-type: none"> - Lengths and heights - Mass/weight - Capacity and volume 	<p>Choose and use appropriate standard units to estimate and measure length/height in any direction (m/cm); mass (kg/g); temperature (°c); capacity (litres/ml) to the nearest appropriate unit, using rulers, scales, thermometers and measuring vessels</p> <p>Compare and order lengths, mass, volume/capacity and record the results using >, < and =</p> <p>Recognise and use symbols for pounds (£) and pence (p); combine amounts to make a particular value</p> <p>Find different combinations of coins that equal the same amounts of money</p> <p>Solve simple problems in a practical context involving</p>	<p>Measure, compare, add and subtract: lengths (m/cm/mm); mass (kg/g); volume/capacity (l/ml)</p> <p>Measure the perimeter of simple 2-D shapes</p> <p>Add and subtract amounts of money to give change, using both £ and p in practical contexts</p> <p>Tell and write the time from an analogue clock, including using Roman numerals from I to XII, and 12-hour and 24-hour clocks</p> <p>Estimate and read time with increasing accuracy to the nearest minute; record and compare time in terms of seconds, minutes and hours; use vocabulary such as o'clock, a.m./p.m., morning,</p>	<p>Convert between different units of measure [for example, kilometre to metre; hour to minute]</p> <p>Measure and calculate the perimeter of a rectilinear figure (including squares) in centimetres and metres</p> <p>Find the area of rectilinear shapes by counting squares</p> <p>Estimate, compare and calculate different measures, including money in pounds and pence</p>	<p>Convert between different units of metric measure (for example, kilometre and metre; centimetre and millimetre; gram and kilogram; litre and millilitre)</p> <p>Understand and use approximate equivalences between metric units and common imperial units such as inches, pounds and pints</p> <p>Measure and calculate the perimeter of composite rectilinear shapes in centimetres and metres</p> <p>Calculate and compare the area of rectangles (including squares), and including using standard units, square centimetres (cm²) and square metres (m²) and</p>	<p>Solve problems involving the calculation and conversion of units of measure, using decimal notation up to three decimal places where appropriate</p> <p>Use, read, write and convert between standard units, converting measurements of length, mass, volume and time from a smaller unit of measure to a larger unit, and vice versa, using decimal notation to up to three decimal places</p> <p>Convert between miles and kilometres</p> <p>Recognise that shapes with the same areas can have different perimeters and vice versa</p> <p>Recognise when it is possible to use formulae for area and volume of shapes</p>

		<p>- Time (hours, minutes, seconds)</p> <p>Recognise and know the value of different denominations of coins and notes</p> <p>Sequence events in chronological order using language [for example, before and after, next, first, today, yesterday, tomorrow, morning, afternoon and evening]</p> <p>Recognise and use language relating to dates, including days of the week, weeks, months and years</p> <p>Tell the time to the hour and half past the hour and draw the hands on a clock face to show these times.</p>	<p>addition and subtraction of money of the same unit, including giving change</p> <p>Compare and sequence intervals of time</p> <p>Tell and write the time to five minutes, including quarter past/to the hour and draw the hands on a clock face to show these times</p> <p>Know the number of minutes in an hour and the number of hours in a day.</p>	<p>afternoon, noon and midnight</p> <p>Know the number of seconds in a minute and the number of days in each month, year and leap year</p> <p>Compare durations of events [for example to calculate the time taken by particular events or tasks].</p>		<p>estimate the area of irregular shapes</p> <p>Estimate volume [for example, using 1 cm³ blocks to build cuboids (including cubes)] and capacity [for example, using water]</p> <p>Solve problems involving converting between units of time</p> <p>Use all four operations to solve problems involving measure [for example, length, mass, volume, money] using decimal notation, including scaling.</p>	<p>Calculate the area of parallelograms and triangles</p> <p>Calculate, estimate and compare volume of cubes and cuboids using standard units, including cubic centimetres (cm³) and cubic metres (m³), and extending to other units [for example, mm³ and km³].</p>
<p><u>2019 ELG</u></p> <p>They recognise, create and describe patterns. They explore characteristics of everyday objects and shapes and use mathematical language to describe them.</p> <p>*There are currently no Geometry ELG statements on the new adopter curriculum</p>	<h2 style="text-align: center; color: yellow;">Geometry – Properties of Shape</h2>	<p>Recognise and name common 2-D and 3-D shapes, including:</p> <ul style="list-style-type: none"> - 2-D shapes [for example, rectangles (including squares), circles and triangles] - 3-D shapes [for example, cuboids (including cubes), pyramids and spheres]. 	<p>Identify and describe the properties of 2-D shapes, including the number of sides and line symmetry in a vertical line</p> <p>Identify and describe the properties of 3-D shapes, including the number of edges, vertices and faces</p> <p>Identify 2-D shapes on the surface of 3-D shapes, [for example, a circle on a cylinder and a triangle on a pyramid]</p> <p>Compare and sort common 2-D and 3-D shapes and everyday objects.</p>	<p>Draw 2-D shapes and make 3-D shapes using modelling materials; recognise 3-D shapes in different orientations and describe them</p> <p>Recognise angles as a property of shape or a description of a turn</p> <p>Identify right angles, recognise that two right angles make a half-turn, three make three quarters of a turn and four a complete turn; identify whether angles are greater than or less than a right angle</p> <p>Identify horizontal and vertical lines and pairs of</p>	<p>Compare and classify geometric shapes, including quadrilaterals and triangles, based on their properties and sizes</p> <p>Identify acute and obtuse angles and compare and order angles up to two right angles by size</p> <p>Identify lines of symmetry in 2-D shapes presented in different orientations</p> <p>Complete a simple symmetric figure with respect to a specific line of symmetry.</p>	<p>Identify 3-D shapes, including cubes and other cuboids, from 2-D representations</p> <p>Know angles are measured in degrees: estimate and compare acute, obtuse and reflex angles</p> <p>Draw given angles, and measure them in degrees (°)</p> <p>Identify:</p> <ul style="list-style-type: none"> - Angles at a point and one whole turn (total 360°) 	<p>Draw 2-D shapes using given dimensions and angles</p> <p>Recognise, describe and build simple 3-D shapes, including making nets</p> <p>Compare and classify geometric shapes based on their properties and sizes and find unknown angles in any triangles, quadrilaterals, and regular polygons</p> <p>Illustrate and name parts of circles, including radius, diameter and circumference and know that the diameter is twice the radius</p> <p>Recognise angles where they meet at a point, are on a straight line, or are vertically opposite, and find missing angles.</p>

				perpendicular and parallel lines.		<ul style="list-style-type: none"> - Angles at a point on a straight line and $\frac{1}{2} a$ turn (total 180°) - Other multiples of 90° <p>Use the properties of rectangles to deduce related facts and find missing lengths and angles</p> <p>Distinguish between regular and irregular polygons based on reasoning about equal sides and angles.</p>	
<p><u>2019 ELG</u></p> <p>Children use everyday language to talk about position to compare quantities of objects and to solves problems</p> <p>*There are currently no Geometry ELG statements on the new adopter curriculum</p>	<h2>Geometry – Position, Direction and Movement</h2>	Describe position, direction and movement, including whole, half, quarter and three- quarter turns.	<p>Order and arrange combinations of mathematical objects in patterns and sequences</p> <p>Use mathematical vocabulary to describe position, direction and movement, including movement in a straight line and distinguishing between rotation as a turn and in terms of right angles for quarter, half and three- quarter turns (clockwise and anti- clockwise).</p>		<p>Describe positions on a 2-D grid as coordinates in the first quadrant</p> <p>Describe movements between positions as translations of a given unit to the left/right and up/down</p> <ul style="list-style-type: none"> ▪ plot specified points and draw sides to complete a given polygon. 	<p>Identify, describe and represent the position of a shape following a reflection or translation, using the appropriate language, and know that the shape has not changed.</p>	<p>Describe positions on the full coordinate grid (all four quadrants)</p> <p>Draw and translate simple shapes on the coordinate plane, and reflect them in the axes.</p>
	<h2>Statistics</h2>		<p>Interpret and construct simple pictograms, tally charts, block diagrams and simple tables</p> <p>Ask and answer simple questions by counting the number of objects in each category and sorting the categories by quantity</p> <p>Ask and answer questions about totalling and comparing categorical data</p>	<p>Interpret and present data using bar charts, pictograms and tables</p> <p>Solve one-step and two-step questions [for example, ‘How many more?’ and ‘How many fewer?’] using information presented in scaled bar charts and pictograms and tables.</p>	<p>Interpret and present discrete and continuous data using appropriate graphical methods, including bar charts and time graphs.</p> <p>Solve comparison, sum and difference problems using information presented in bar charts, pictograms, tables and other graphs.</p>	<p>Solve comparison, sum and difference problems using information presented in a line graph</p> <p>Complete, read and interpret information in tables, including timetables.</p>	<p>Interpret and construct pie charts and line graphs and use these to solve problems</p> <p>Calculate and interpret the mean as an average.</p>

Ashdene Primary School

Excellence: everyone, everywhere, every day

	Ration and Proportion						<p>Solve problems involving the relative sizes of two quantities where missing values can be found by using integer multiplication and division facts</p> <p>Solve problems involving the calculation of percentages [for example, of measures, and such as 15% of 360] and the use of percentages for comparison</p> <p>Solve problems involving similar shapes where the scale factor is known or can be found</p> <p>Solve problems involving unequal sharing and grouping using knowledge of fractions and multiples.</p>
	Algebra						<p>Use simple formulae</p> <p>Generate and describe linear number sequences</p> <p>Express missing number problems algebraically</p> <p>Find pairs of numbers that satisfy an equation with two unknowns</p> <p>Numerate possibilities of combinations of two variables.</p>

Ashdene Primary School – Maths Curriculum

Purpose of study	Mathematics is a creative and highly inter-connected discipline that has been developed over centuries, providing the solution to some of history's most intriguing problems. It is essential to everyday life, critical to science, technology and engineering, and necessary for financial literacy and most forms of employment. A high-quality mathematics education therefore provides a foundation for understanding the world, the ability to reason mathematically, an appreciation of the beauty and power of mathematics, and a sense of enjoyment and curiosity about the subject.
Aims	<ul style="list-style-type: none"> • become fluent in the fundamentals of mathematics, including through varied and frequent practice with increasingly complex problems over time, so that pupils develop conceptual understanding and the ability to recall and apply knowledge rapidly and accurately • reason mathematically by following a line of enquiry, conjecturing relationships and generalisations, and developing an argument, justification or proof using mathematical language • can solve problems by applying their mathematics to a variety of routine and non-routine problems with increasing sophistication, including breaking down problems into a series of simpler steps and persevering in seeking solutions.
Maths at Ashdene	At Ashdene in every maths lesson we aim to develop children's reasoning and problem solving. Furthermore, children develop their mathematical understanding through the use of concrete, pictorial and abstract resourcing which are made available to all children in every lesson. We aim to revisit and review mathematical concepts and make links between them in order to ensure children have a deeper understanding of the maths curriculum.

	2	Number recognition Counting to 10/20		Numbers to 5 Count up to 5 with correct 1:1 correspondance. Recognise numerals from 1-5 Order numerals from 1-5 Begin to write numerals from 1-5 Subitise within 5 Textbook A Unit 1	
	3	Subitising to 5			

	4	Subitising to 5		<p>Comparing within 5 Know the meaning of the words more and less Recognise a group that has more object Recognise a group that has less objects Identify one more than a number up to 5 Identify one less than a number up to 5</p>
	5	One more and one less		
	6	Counting objects that can't be moved		
	7			<p>2D shape Recognise shape within the environment Name 2D shapes square, triangle, rectangle, hexagon, pentagon, circle</p>
HT2	Week	Mental Maths	Suggested Long Term Retrieval	Maths Curriculum
	1 (4 days)	Number bonds to 6		<p>Composition of numbers within 5 Know that numbers up to 5 can be made using 2 other numbers.</p>
	2	Identifying more/fewer		<p>Addition within 5 Know that + means to add amounts together Know that = means equals Know that when we add amounts together a number gets bigger Read number sentence and use resources to find the answer</p>

3	Counting on from a given number		Number bonds within 5 Number bonds are 2 numbers that total 5 There is more than one way to make the number 5 Name more than one way to make the number 5
4	Counting back from a given number		Subtraction within 5 Know that – means to take away (subtract) Know that = means equals Know that when we subtract amounts the number gets smaller Read a number sentence and use resources to find out the answer.
5			Numbers to 10 Recognise numerals from 6-10 Name numerals from 6-7
6	Finding one more or one less than a given number Number recognition		Counting using 1:1 correspondence and amount up to 10 Count out 10 from a bigger group Order numbers from 1-10 Begin to write numerals from 6-10 Subitise amounts within 10
7			

				Retrieval Practice
				Numbers to 5, Shape, Number bonds within 5, Space
				Maths Curriculum
HT3	Week	Mental Maths	Suggested Long Term Retrieval	
	8	Number bonds within 5		
	1 (4 days)	Counting to 10	Number recognition 1-5 Number ordering 1-5	Composition of numbers to 10 Know that numbers up to 10 can be made using 2 other numbers.
	2	Finding one more or one less from numbers to 20	Forming numerals 1-10	Comparing numbers within 10 Use a number line to find one more than a number to 10 Use a number line to find one less than number to 10 Use resources to add 1 more and 1 less than any number to 10
	3	Counting on and counting back	Counting with 1:1 correspondence 1-10 Challenge: Spot a mistake	Addition within 10 Know that + means to add amounts together Know that = means the total amount Know that when we add 2 amounts together the number gets bigger Rad a number sentence and use resources to work out the answer.
	4	Subitising 10	Identifying more and less with amounts up to 10 Challenge: true or false statements.	Number bonds Know that number bonds are 2 umbers that make 10 There are more than one way to make 10 Name more than one way to make the number 10.
	5	Finding one more and one less	Reading addition sentences and finding the total amount Challenge: writing number sentences	
	6	Counting on Counting back	Number bonds to 10 Challenge: writing number sentences to represent	Subtracting numbers within 10 Know that – means to take away Know that = means equals Know that when we subtract the number gets smaller Read subtraction sentences and use resources to find out the answer

6	One more and one less to 20	Use shapes to create patterns and images	<p>Measure (Volume and Capacity) – National Curriculum Links</p> <p>Compare quantities up to 10 in different contexts, recognising when one quantity is greater than, less than or the same as the other quantity.</p> <p>Demonstrate strength, balance and coordination when playing.</p>																			
			<p>Potential Provision activities</p>																			

ACTIVITY	AREA	DESCRIPTION	RESOURCES
Fill up the jugs	Sand/water area	Set up some challenges for small groups of children to explore. Ask: <i>How many cups will fill up this jug? Which of these containers holds the most sand? How many spoonfuls of sand fill this cup?</i>	Containers, cups, spoons, ladles, sand
Pouring drinks	Water area	Ask children to 'pour drinks' for other children. Can they make the cups nearly full? Can they put the same amount of water in each cup?	Cups, jug, water
Fill the containers	Home corner or baking area	Provide bags of various dry ingredients for children to put into containers. Encourage children to choose from a selection of utensils to use to fill the containers. Ask: <i>Which utensil is best for moving the rice/pasta/lentils? How many of each utensil do you think you will need to fill this container with rice/pasta/lentils?</i>	Selection of dry kitchen ingredients (rice, pasta, lentils), containers, selection of utensils (cups, spoons, ladles)

Maths Curriculum

Retrieval Counting on and counting back, numbers to 20

Numerical Patterns – National Curriculum Links

Explore and represent patterns within numbers up to 10, including evens and odds, double facts and how quantities can be distributed equally.

Potential Provision activities

ACTIVITY	AREA	DESCRIPTION	RESOURCES
Matching groups	Classroom	Children take turns to group a small number of objects (up to 5), for example, a line of counters, a tower of blocks or a group of objects from the small world play. Their partner then replicates the objects to double them.	Counters, blocks, small world play resources
Double butterflies/ladybirds	Art area	Encourage children to paint butterflies. Once the background is dry, they can add the same number of spots to each wing to create a double. A similar activity can be done using paper plates to make ladybirds with the same number of spots on each wing.	Paper, paint, paper plates, round stickers for spots
Dominoes	Classroom	Provide some classic dominoes for children to explore. They can play dominoes by matching them end to end, or sort into doubles and non-doubles.	Dominoes
Dice doubles	Classroom	Children play a simple dice game. They throw two dice and collect a counter if they roll a double.	Dice, counters

Sorting – National Curriculum Links

Compare quantities up to 10 in different contexts, recognising when one quantity is greater than, less than or the same as the other quantity.

Potential Provision activities

HT6

Week	Mental Maths	Suggested Long Term Retrieval
1 (4 days)	Counting up to 20	Using language to describe capacity
2	Number bonds within 10	AB/ABB/patterns Challenge: ABC pattern making and spotting mistakes.
3	Doubles within 10	Mark making to show doubles within 10 Challenge: number sentences to show a double
4	Halves within 10	Halving objects
5	Retrieval practice across HT6	Sharing amounts

ACTIVITY	AREA	DESCRIPTION	RESOURCES
Button collection	Discovery table	Children sort buttons into groups and give rules to their groups (colour; number of holes; large or small).	Selection of buttons
Let's tidy up!	Classroom	Children sort resources around the classroom into clearly labelled baskets, boxes, trays or pots.	Containers, labels
Washing up	Art area	Children sort painting utensils into groups ready for washing up: brushes (large and small), glue spatulas, glue or paint pots.	Washing up bowl, painting utensils

6

Retrieval practice across HT6

Grouping and sorting objects

Time – National Curriculum Links

Express their ideas and feelings about their experiences using full sentences, including use of past, present and future tenses and making use of conjunctions, with modelling and support from their teacher.

Know some similarities and differences between things in the past and now, drawing on their experiences and what has been read in class.

Potential Provision activities

ACTIVITY	AREA	DESCRIPTION	RESOURCES
Clock faces	Classroom or hall	Draw attention to clocks at different times of the day, for example: <i>Look, it's 12 o'clock, it is time for lunch.</i>	Analogue clocks around school
Visual timetable display board	Classroom	Make a display board of o'clock times relating to the school day, including clock faces showing the times. Ask children to match the photos to the correct time of day by discussing and sequencing the day's events.	Laminated photos of children at different times of the day, for example, registration, playtime, lunchtime, home time. Laminated labels and related clock faces
Nocturnal animals	Classroom	Read books and create pictures of nocturnal animals. Use these as a prompt for discussion about day and night and the difference between them.	Books and pictures of nocturnal animals

7

Retrieval practice across HT6

Use clocks to show a time.

Retrieval

Ashdene Primary School – Maths Curriculum

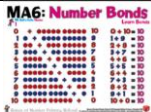

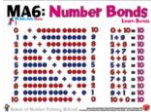

Purpose of study	Mathematics is a creative and highly inter-connected discipline that has been developed over centuries, providing the solution to some of history’s most intriguing problems. It is essential to everyday life, critical to science, technology and engineering, and necessary for financial literacy and most forms of employment. A high-quality mathematics education therefore provides a foundation for understanding the world, the ability to reason mathematically, an appreciation of the beauty and power of mathematics, and a sense of enjoyment and curiosity about the subject.
Aims	<ul style="list-style-type: none"> become fluent in the fundamentals of mathematics, including through varied and frequent practice with increasingly complex problems over time, so that pupils develop conceptual understanding and the ability to recall and apply knowledge rapidly and accurately reason mathematically by following a line of enquiry, conjecturing relationships and generalisations, and developing an argument, justification or proof using mathematical language can solve problems by applying their mathematics to a variety of routine and non-routine problems with increasing sophistication, including breaking down problems into a series of simpler steps and persevering in seeking solutions.
Maths at Ashdene	At Ashdene in every maths lesson we aim to develop children’s reasoning and problem solving. Furthermore, children develop their mathematical understanding through the use of concrete, pictorial and abstract resourcing which are made available to all children in every lesson. We aim to revisit and review mathematical concepts and make links between them in order to ensure children have a deeper understanding of the maths curriculum.

Ashdene Primary School – Maths Curriculum

Purpose of study	Mathematics is a creative and highly inter-connected discipline that has been developed over centuries, providing the solution to some of history's most intriguing problems. It is essential to everyday life, critical to science, technology and engineering, and necessary for financial literacy and most forms of employment. A high-quality mathematics education therefore provides a foundation for understanding the world, the ability to reason mathematically, an appreciation of the beauty and power of mathematics, and a sense of enjoyment and curiosity about the subject.					
Aims	<ul style="list-style-type: none"> become fluent in the fundamentals of mathematics, including through varied and frequent practice with increasingly complex problems over time, so that pupils develop conceptual understanding and the ability to recall and apply knowledge rapidly and accurately reason mathematically by following a line of enquiry, conjecturing relationships and generalisations, and developing an argument, justification or proof using mathematical language can solve problems by applying their mathematics to a variety of routine and non-routine problems with increasing sophistication, including breaking down problems into a series of simpler steps and persevering in seeking solutions. 					
Maths at Ashdene	At Ashdene in every maths lesson we aim to develop children's reasoning and problem solving. Furthermore, children develop their mathematical understanding through the use of concrete, pictorial and abstract resourcing which are made available to all children in every lesson. We aim to revisit and review mathematical concepts and make links between them in order to ensure children have a deeper understanding of the maths curriculum.

Money Sense Enterprise Lesson 3 to be completed

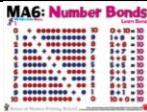

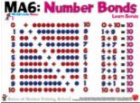

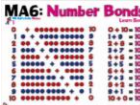

Ashdene Primary School – Maths Curriculum

Purpose of study	Mathematics is a creative and highly inter-connected discipline that has been developed over centuries, providing the solution to some of history’s most intriguing problems. It is essential to everyday life, critical to science, technology and engineering, and necessary for financial literacy and most forms of employment. A high-quality mathematics education therefore provides a foundation for understanding the world, the ability to reason mathematically, an appreciation of the beauty and power of mathematics, and a sense of enjoyment and curiosity about the subject.					
Aims	<ul style="list-style-type: none"> become fluent in the fundamentals of mathematics, including through varied and frequent practice with increasingly complex problems over time, so that pupils develop conceptual understanding and the ability to recall and apply knowledge rapidly and accurately reason mathematically by following a line of enquiry, conjecturing relationships and generalisations, and developing an argument, justification or proof using mathematical language can solve problems by applying their mathematics to a variety of routine and non-routine problems with increasing sophistication, including breaking down problems into a series of simpler steps and persevering in seeking solutions. 					
Maths at Ashdene	At Ashdene in every maths lesson we aim to develop children’s reasoning and problem solving. Furthermore, children develop their mathematical understanding through the use of concrete, pictorial and abstract resourcing which are made available to all children in every lesson. We aim to revisit and review mathematical concepts and make links between them in order to ensure children have a deeper understanding of the maths curriculum.

Ashdene Primary School – Maths Curriculum

Purpose of study	Mathematics is a creative and highly inter-connected discipline that has been developed over centuries, providing the solution to some of history's most intriguing problems. It is essential to everyday life, critical to science, technology and engineering, and necessary for financial literacy and most forms of employment. A high-quality mathematics education therefore provides a foundation for understanding the world, the ability to reason mathematically, an appreciation of the beauty and power of mathematics, and a sense of enjoyment and curiosity about the subject.					
Aims	<ul style="list-style-type: none"> become fluent in the fundamentals of mathematics, including through varied and frequent practice with increasingly complex problems over time, so that pupils develop conceptual understanding and the ability to recall and apply knowledge rapidly and accurately reason mathematically by following a line of enquiry, conjecturing relationships and generalisations, and developing an argument, justification or proof using mathematical language can solve problems by applying their mathematics to a variety of routine and non-routine problems with increasing sophistication, including breaking down problems into a series of simpler steps and persevering in seeking solutions. 					
Maths at Ashdene	At Ashdene in every maths lesson we aim to develop children's reasoning and problem solving. Furthermore, children develop their mathematical understanding through the use of concrete, pictorial and abstract resourcing which are made available to all children in every lesson. We aim to revisit and review mathematical concepts and make links between them in order to ensure children have a deeper understanding of the maths curriculum.

Ashdene Primary School – Maths Curriculum

Purpose of study	Mathematics is a creative and highly inter-connected discipline that has been developed over centuries, providing the solution to some of history's most intriguing problems. It is essential to everyday life, critical to science, technology and engineering, and necessary for financial literacy and most forms of employment. A high-quality mathematics education therefore provides a foundation for understanding the world, the ability to reason mathematically, an appreciation of the beauty and power of mathematics, and a sense of enjoyment and curiosity about the subject.
Aims	<ul style="list-style-type: none"> become fluent in the fundamentals of mathematics, including through varied and frequent practice with increasingly complex problems over time, so that pupils develop conceptual understanding and the ability to recall and apply knowledge rapidly and accurately reason mathematically by following a line of enquiry, conjecturing relationships and generalisations, and developing an argument, justification or proof using mathematical language can solve problems by applying their mathematics to a variety of routine and non-routine problems with increasing sophistication, including breaking down problems into a series of simpler steps and persevering in seeking solutions.
Maths at Ashdene	At Ashdene in every maths lesson we aim to develop children's reasoning and problem solving. Furthermore, children develop their mathematical understanding through the use of concrete, pictorial and abstract resourcing which are made available to all children in every lesson. We aim to revisit and review mathematical concepts and make links between them in order to ensure children have a deeper understanding of the maths curriculum.

Year 6

		Week	Mental Maths	Suggested Long Term Retrieval	Maths Curriculum

Ratio and Proportion – National Curriculum Links

solve problems involving unequal sharing and grouping using knowledge of fractions and multiples

solve problems involving similar shapes where the scale factor is known or can be found

solve problems involving the relative sizes of two quantities where missing values can be found by using integer multiplication and division facts

KEY LANGUAGE

There is some key language that children will need to know as part of the learning in this unit.

- ratio, ratio notation, 1 : 2
- proportion
- part, whole, total
- group
- fraction
- unequal, equal
- simplest form, simplify
- for every x there are y
- similar
- enlarge, enlargement
- scale, map scale, scale factor

Ashdene Primary School

Excellence: everyone, everywhere, every day

	3 (4 days)		Algebra simple formulae Imperial and metric measures		Retrieval Practice Revision Week
